Work summary

I always divide each task into three parts. In the first part, I build the structure of the project using html, css, bootstrap, tailwind-css or material ui, react, etc. In the second part, I do functionality related work like authentication, data fetching, server, database, etc. And finally, in the third part, I make the project attractive by completing its design part. Vs code, GitHub, Google search engine seem to be my daily companion
